## A

**Algorithm** *Noun* • A series of instructions that are executed in order

to solve a problem

## H

**Hoisting** *Verb* • When an interpreter (such as the JavaScript interpreter) raises all defined functions to the top of the code before the main

program is executed. This means that a function can be called before it has been defined.

## M

**Machine Learning** *Noun* • The study of algorithms that automatically

improve with experience
